If written in a language other than English, then please attach a typed translation as well as the hand-written original.)

SEKRETARZ GENERALNY
AEROKLUBU POLSKIEGO

Marcin Kwiatosz

NAC Signature :

President or Secretary General of nominating FAI National Airsport Control

(must be submitted to the FAI Office by November 15)

Me and my passion

When I was a young boy, my grandparents and parents were always pointing out passing airplanes to me as they flew overhead. Back then, I thought it was amazing how the planes appeared to be so small in the sky and people actually fit inside them, I could not understand it. That was until I first saw a plane on the ground at an airport. A few years later my mother took me to a youth culture center where she signed me up for classes related to the construction of aircrafts. That was where I learned how to properly build a flying plane.

Those classes taught me a lot about flight mechanics and aerodynamics. There I built my first plane that I entered to win my first competition. A couple weeks later my instructor asked me if I ever want to become a World Champion? I replied that I really did want to and started think seriously about it, after a while it became a true dream of mine. In the following two years I achieved a big results in national competitions within my country, which qualified for join to the Polish national team. This achievement meant that I could compete in my first World Championship.

The first World Championship I entered in 2014 was held in Salonta, Romania. I was preparing to go there for very long time, so when I finally made it I was ready. Unfortunately, I did not have too much luck in this championship. My plane hit a power line in the last round so I didn't get enough points to win any awards. Luckily, in the same year I won 2nd place in the general classification of the World Cup. That season was very difficult for me, I think because I was very young.

The following year was more fortunate for the Polish team. Hard training and participation in more competitions gave us better results. Our team was able to fight from the beginning to the end with excellent performance. At the European Championships we came in 2nd place in team classification. This achievement helped me secure 2nd place in the general classification of World Cup.

The 2016 World Championships were the most fortunate for me. That year I became a World Champion. I am so happy that my dream actually came true. The Russian, American and Ukrainian participants in particular posed a tough competition. In the end, my instructor and my parents were very proud of my achievement. For the first time in history, a Pole became a World Champion. As a junior I still have one more chance to go to the European Championships and I will fight for it the best I can. As a champion I have one chance to go to World Championship in the senior class. If I were granted this scholarship, I would use the money to help me achieve this goal. In the future, I would like to be accepted into a good university and study in the mechanical aviation field focusing on the construction of aircrafts.

Aero modelling inspires a feeling inside of me that I am doing something useful. I hope one day I can study aviation and learn how to apply the knowledge and principles I acquired over the years to do something meaningful. I am absolutely certain that in my life I want to work with planes. A lot of professional pilots currently flying began exploring their passion with aero modelling and likewise I hope that my experience and skills will kindly be considered for earning this scholarship.

Daniel Bogomaz Poland.
